Genre: Action, Thriller Language: Hindi, English Runtime: 1h 53m. Directed by: Aswin Raam Starring: Manoj Bajpayee, Zaira Wasim, Reshmi Ghosh. The Body is a 2003 Indian crime thriller film that was directed by Aswin Raam. It is a remake of the 2000 film of the same name, directed by Mani Ratnam, which starred Amitabh Bachchan. The plot follows the investigating of the mysterious death of a student at [...]. Tumor thickness and local nodal status are independent predictors of lymph node involvement and survival in melanoma. The current World Health Organization (WHO) classification for cutaneous melanomas classifies melanomas into four distinct subtypes (1) superficial spreading melanoma, (2) lentigo maligna melanoma, (3) nodular melanoma, and (4) other. Although the survival of patients with different subtypes of melanoma is similar, subtype 2 and 3 are associated with a higher risk of regional lymph node involvement. The aim of this study is to determine the factors that independently predict nodal metastasis. The study included 582 patients with primary cutaneous melanoma (mean age = 60 yr, range = 10-98 yr). Two hundred thirty-nine patients had subtype 1, 111 had subtype 2, 149 had subtype 3, and 72 had other subtypes of melanoma. Three hundred forty-four patients had nonextremity lesions. According to the Breslow thickness, the group with subtype 2 melanoma was significantly associated with increased risk of lymph node metastasis ( $P = 0.004$ ). Multivariate analysis showed that the thickness of the melanoma ( $P = 0.004$ ). Anomoea pretiosa is a moth of the family Erebidae. It is known from the United States, from Washington and Oregon north to British 82157476af
