Customize Windows sounds with the SoundPackager program. An ultimate tool for modifying the Windows sounds for customizing the Windows sound scheme for any user. You can also extract the sound schemes from the built-in Windows sound scheme provided by. Installation SoundPackager can be installed on Windows with the help of the installer: SoundPackager Installer. The program consists of a small Getting Started. All the sounds in SoundPackager can be categorized into default, system and custom. The Default folder is the root folder for all the sounds and its default sounds. The Default folder has the original sound from Windows 7. SoundPackager can also be used to create custom sounds from the system sounds. Creating new sounds. The wav file can be created and saved from the menus Sound > Recording and Sound > New Recording. However, a wav file will not have any playback controls and hence cannot be used to playback the sound. Hence, SoundPackager also provides options to create custom sounds from the system sounds. Creating new sounds from the system sounds can be done by clicking the File > New Windows Sound from the Menu. The program will create a new sound called 'Custom Sound' with all the sounds from the default folder as the parent folder. Creating new custom sounds. The new sound can be used to create sounds which can be used for play back. Customizing the sound scheme. A pre-defined sound scheme of sounds can be extracted using the GUI or a wav file can be created using the.
